

Table Search Guide

Wednesday, 21 January 2009 11:00 - Last Updated Saturday, 26 April 2014 09:57

This is a basic guide on how to use the search facilities available in the various table on the website.

There is a sample diagram shown below & further notes after the sample.

Please Note: The searchable tables on this web site utilise JavaScript. Please ensure that you have enabled JavaScript in your Browser - usually found in the "Preferences", "Settings" or "Options" section, depending on which browser you are using. If you do not enable JavaScript, the tables may not render correctly and you may bounce out of the table back to the home page with an error message.

We encourage you to experiment with your search using the methods outlined below.

Members Interest Directory - Search Guide Diagram

Surname	Period	Country	State / County	Location	Member
ABLE	>1840	England	Norfolk	Henstead	0009
ABRAHAM	1820	England	Cheshire	Chester	0009
ABRAHAM	<1848	England	Cornwall	St Isesey	00001
ABRAHAM	<1878	England	Cornwall	Warleggan	00001
ABRAHAMIS	1794	England			0008
ACKLAND	<1913	England	Devon	Uttculme	0008
ACKLAND	>1800	England	Devon	Barnstaple	000099
ACKLAND	>1800	England	Devon	Barnstaple	000099
ACRAMAN	c1901	Australia	New South Wales	Sydney	000027
ACRAMAN	c1882	Australia	South Australia	Adelaide	000027

Reset filters

Page 1 of 6/1

rows per page

For all tables: Click on the image at right to zoom.

Use the **Selection Box down arrows** (under the column headings) to select an item of interest in that column

Narrow your choice by using more than one down arrow selection, e.g. Choose a **Country**, a **State** / **County**, and perhaps a **Location**

, or any combination of these

Where there is no down arrow appearing for a column, you can type into the box to select any occurrence of the letters in that column, and hit enter

For example: If you are searching for the **Surname** Brown or Broun, you can either type the full name, or an abbreviation. If you type "

bro

" (without the inverted commas) in the Surname column selection box and hit enter, the table will filter to all of the occurrences of "bro" in any / all of the surname entries; the result will show all of the Brown and Broun surnames, as well as other names with "bro" in them.

- For the Members Interest Directory table only:

Type a Member Number in the box for that column, and then hit your enter key. The table will then show all entries for that Member number *(if any of the other column filters have been previously set to filter on another criteria, the table will show only the combined filter result)*

- To Contact the Member *(This function also applies in the WA Surnames List)*

Clicking on any Membership Number will open your email program, with the email address for that member already entered in the "To" section

- For the Genealogy Links Table only:

Type a **keyword** into the **Title** selection box, e.g. **index**, which will give you all occurrences of the word **index** in

the tables

Title

column

To Find our **Best** (or *Favourite Links*) collection, use the down arrow on the **Best** heading & select

1

. This will show all of our Best Links selection. You can then use the other column headings selection boxes to narrow your results.

There are about 50 links in our Best collection

- **NEW Links** - you can find any new links by selecting the number **7** in our **Best** column filter. New links will be updated on the 7th of each month.

For all Tables:

- Selecting the "---" option in any selection box, will restore that column to all items
- Clicking on any of the Column Titles will sort the table entries in Alpha-numeric order, clicking on the same title again will re-sort the table in reverse order
- Use the **directional arrows** at the bottom of the table to progress between pages
- The tables automatically start with **10 or 20 Rows per page**. You can alter the number of "**rows per page**" in the selection box at the bottom right corner of the table page
- Click on the **Reset filters** box at the bottom left of the table to re-show all entries in the table
